

Projecting from Zoom to your Smart TV using an Apple Mobile or Tablet device

- Download and install the Zoom App from the App Store
- Open the Zoom app, tap 'Join', and enter the Meeting ID/Password when prompted

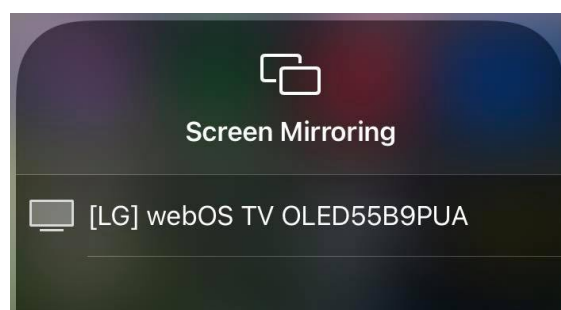

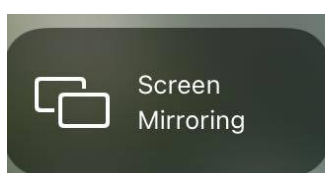

Note: your device must be connected to your at-home wireless network

- Swipe up from the bottom of the screen (or press the home button) to return to the home screen, then swipe down from the top-right (or bottom) of the screen to open the Control Center

- Tap 'Screen Mirroring' and then the name of your TV/destination device

Note: Screen Mirroring must be enabled on your TV/destination device in order for its name to appear. This is often enabled by default, but may need to be enabled within your device's settings.

For example, on a Roku TV, turn on the Roku device and open the Settings menu, select System, then 'Screen Mirroring', and make sure the "Enable screen mirroring" option is checked.

- Verify that your device is being projected to your TV, and return to the Zoom app
- To stop sharing, swipe up from the bottom to return to the home screen, then swipe down from the top-right to re-open the Control Center. Tap your TV/destination device name, then tap 'Stop Mirroring'.
